Proc. Natl. Acad. Sci. U.S.A. 91:12081-12085 (1994).
-! FUNCTION: Stimulates the secretion of gonadotropins.
-! STUBCELLUIAR LOCATION: Secreted.
-! STUBCELLUIAR LOCATION: Geneted.
-! SIMILARITY: Belongs to the GERH family.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Jansen H.T., Stevens P.J., Zeitler P., Lehman M.N.; Submitted (MAR-1997) to the EMBL/GenBank/DDDJ databases.
-! FUNCTION: Stimulates the secretion of gonadotropins; it stimulates the secretion of forb luteinizing and follicle-stimulating
Pellows R., Blackwell R., Vale W., Guillemin R.;
"Primary structure of the ovine hypothalamic luteinizing hormone-
releasing factor (LAF) (LH-hypothalamus-LAF-gas chromatography-mass
spectrometry-decapeptide-Edman degradation).";
Proc. Natl. Acad. Sci. U. S.A. 69:278-282(1972).
-!- FONCTION: Stimulates the secretion of gonadotropins; it stimulates
the secretion of both luteinizing and follicle-stimulating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            PRINTS; PRO1541; GONADOLIBRNI.

-!- TISSUE SPECIFICITY: Forebrain.
-!- DEVELOPMENTAL STAGE: Expressed at significantly higher levels during post-breeding. Not expressed in pituitary.
-!- SIMILARITY: Belongs to the GRRH family.

"Two differing precursor genes for the salmon-type gonadotropin-
releasing hormone exist in salmonids.";
J. Mol. Endocrinol. 15:1-9(1995).
-!- FUNCTION: Stimulates the secretion of gonadotropins.
-!- SUBCELULUAR LOCATION: Secreted.
-!- TISSUE SPECIFICITY: Brain.
-!- SIMILARITY: Belongs to the GRRH family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Score 40; DB 1; Length 82;

Molecular cloning of a CDNA encoding the prepro-salmon gonadotropin-releasing hormone of the red seabream.";
Gen. Comp. Endocrinol. 96:234-242(1994).
-!- FUNCTION: Stimulates the secretion of gonadotropins.
-!- SUBCELLULAR LOCATION: Secreted.
-!- SIMILARITY: Belongs to the GRRH family.

Cell. Endocrinol. 164:197-204 (2000).
-!- FUNCTION: Stimulates the secretion of gonadotropins.
-!- SUBCELLULAR LOCATION: Serreted.
-!- TRSUE SPECTIFICITY: Expressed in forebrain but not in testis, ovary, kidney and liver.
-!- SIMILARITY: Belongs to the GnRH family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            AMIDATION (G-35 PROVIDE AMIDE GROUP) (BY

0
-!- FUNCTION: Stimulates the secretion of gonadotropins; it stitute secretion of both luteinizing and follicle-stimulating hormones (By similarity).
-!- SUBCELLULAR LOCATION.
-!- TISSUE SPECTRITY: MIDBRAIN.
-!- SIMILARITY: Belongs to the GARH family.
